Study Title: Precision medicine Adaptive Network platform Trial in Hypoxemic acute respiratory failure, the PANTHER Trial

Protocol number: 175151

Protocol Version: v2.1

Dear REC and HRA,

PANTHER Non-Substantial Amendment 01 – NSA01

We would like to submit a non-substantial amendment to make the following changes:-

1. Correction to the PANTHER Master protocol, the previous version detailed the sample collection points as 'baseline, day 3 and day 7' this has been updated to 'baseline day 2 and day 6'. This detail has been amended in the visit schedule 6.4 and research samples 6.8. Both tracked and clean versions are available:-
 - a. PANTHER Master Protocol V2.1 30.07.2025_Tracked
 - b. PANTHER Master Protocol V2.1 30.07.2025_Clean
2. Correction to the PANTHER_UK_Region Specific Appendix, the previous flow chart contained reporting information relating to devices 'report SAEs to the MHRA in 7 days' this is not applicable to PANTHER which is deemed as an IMP trial, not a device trial, therefore this detail has been removed. Both tracked and clean versions are available:-
 - a. PANTHER_UK_Region Specific Appendix_v1.1_20250805_TC
 - b. PANTHER_UK_Region Specific Appendix_v1.1_20250805_Clean
3. Amending current questionnaire of the MOCA-Blind to the MOCA-Mini. We have received feedback from our PPI group and collaborators who have deemed the MOCA-Mini as less burdensome on patients and just as scientifically equivalent to the MOCA-Blind.

4. We would also like to submit a renewed insurance certificate for the trial

Yours sincerely
Janis
